intuitive REVERSE / QUICK STOP control panel

scale (cm/inch) with magnetic cutting width limiter

builtin thermal protection (dust protection)

cutting section quality (Krug + Priester cutting knives)

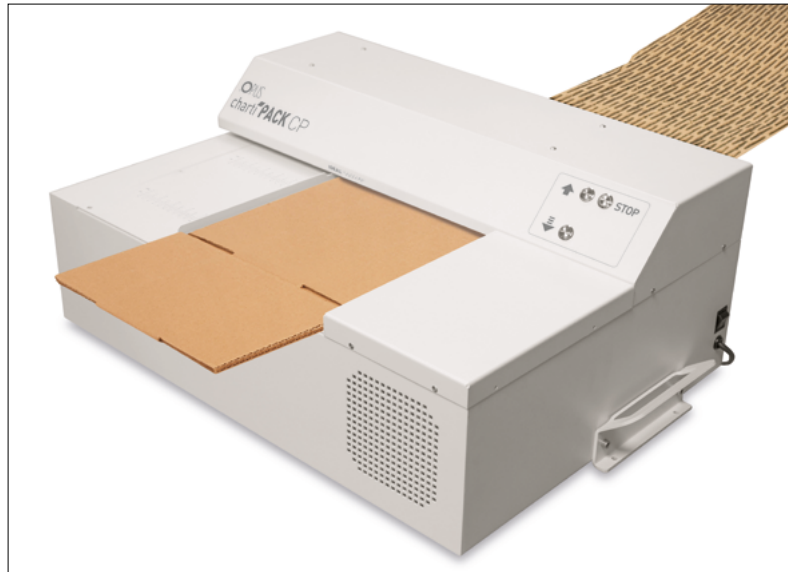

robust powdercoated housing, carrying handles

RECYCLE?
IT PAYS OFF!

charti**PACK** CP

NEW!

chartiPACK CP shredder in operation. Uncut cardboard is inserted into the feed slot. On the other side of the device is a slot from which the finished cut filler comes out.

info

- **Super fast and efficient operation.** The shredder operates at a **very high speed of 13.2 m/min**, placing it at the top of the ranking of similar devices. **The 12 mm high feed slot** enables simultaneous cutting of **2 to 3 cardboard sheets** – depending on the material used. In addition, the device's **powerful drive** guarantees continuous, smooth, fast and stable operation.
- **Cutting section quality.** Cutting knives from **Krug + Priester**, who deliver the worldrenown robust IDEAL brand shredders. The cutting system is manufactured in accordance with firm company standards: the knives are made from a single block of steel, which ensures great strength and cutting precision.
- **Safety devices.** The device is equipped with **thermal protection** to prevent the motor from overheating. What's more, the electronics and drive of the shredder are **tightly encased**, so that no dust generated during cardboard cutting can get inside.
- **Cleaning system** for removing material residues and dust from the cutting section.
- **Intuitive control panel** for simple operation and quick access to functions such as **reverse run** or **immediate interruption** of operation.
- **Scale.** A scale marked on the worktop makes it easy to produce fillers of the desired dimensions. A magnetic limiter is included for permanently locking the cardboard cutting width.
- **Compressing bar** which cushions the cut cardboard, so that the resulting filler is flexible and better able to adapt to the contents of the package and therefore better protect its contents.
- **Robust housing**, powder coated.
- **Convenient carrying handles.**
- Two models available: **with 230V single-phase** and with **400V three-phase electricity supply**, depending on available installation options. Device specifications are the same for both models.
